New Digital Sight Series
Providing a more user-friendly imaging experience

Nikon’s new image acquisition and measurement application for microscope cameras enables simple camera control of the DS-Fi3 high-definition, high-sensitivity general purpose color camera and DS-Ri2 high-definition color camera via a tablet PC.
Three camera options covering two computing platforms

**Microscope Camera**  
**DS-Fi3**
- 5.9 megapixel
- Color High-resolution
- Frame rate: 15 fps (2880 × 2048), 30 fps (1440 × 1024)
- Max recordable pixels: 2880 × 2048
- Mount: C-mount

**Microscope Camera**  
**DS-Ri2**
- 16.25 megapixel Color High-resolution
- Frame rate: 6 fps (4908 × 3264), 45 fps (1636 × 1088)
- Max recordable pixels: 4908 × 3264
- Mount: F-mount

**Monochrome Microscope Camera**  
**DS-Qi2**
- 16.25 megapixel Monochrome Cooled
- Frame rate: 6 fps (4908 × 3264), 45 fps (1636 × 1088)
- Max recordable pixels: 4908 × 3264
- Mount: F-mount

**Using a tablet PC**
- Imaging software: NIS-Elements

**Using a desktop PC**
- Imaging software: NIS-Elements

Camera Control

Superior color reproduction

Nikon is well-known for outstanding and lifelike color reproduction, and developing superior algorithms for creating results that look like the actual samples. These algorithms are used in all of the color cameras in the digital sight lineup.

High-speed live display

Fast USB3.0 data transfer means fast, smooth live updating of images for finding samples or focusing, even at full resolution.

Quantum efficiency and read noise have been greatly improved, providing better capability for acquisition of fluorescent images with better signal-to-noise ratios than before.

High sensitivity, low noise

The DS-Fi3 interfaces with PC computers via a USB3.0 interface directly to the camera head, and uses NIS-Elements series software for image acquisition.

High-resolution images

A CMOS high density 5.9 megapixel sensor produces high resolution images. USB3.0 date transfer allows fast focusing at high resolution, and easy capture images in all types of observation methods such as brightfield, differential interference contrast, and phase contrast.

Microscope Camera

**DS-Ri2**

- **16.25 megapixel**
- **Color**
- **High-resolution**

Photography with the natural colors seen through the microscope

Nikon is a leader in development of algorithms for reproducing color just as the eyes see it.

The DS models’ image processing engine is based on extensive data accumulated over many years of developing microscope color digital cameras, resulting in perfect reproduction of the colors your eyes see in the microscope.

High-resolution images

16.25-megapixel CMOS image sensors for astonishing image quality

The DS series enables one-shot instantaneous capture and fast storage of images with resolution as high as 4908 x 3264 pixels, without pixel shifting or pixel stepping. This pixel density is ideally suited for photomicrography of ultra-fine structures or patterns in biological or industrial samples, at low or high magnifications.

---

**High-speed live display**

**High-speed display, even of supra-HDTV-class live images**

The DS-Ri2 can display 4908x3264 pixel (full-pixel) images at 6 fps, or 1636x1088 pixel (3x3 pixel averaging) images at 45 fps. This fast live frame rate makes fine focusing easy to perform.

Capture Low light fluorescence and Large Fields of View

Monochrome Microscope Camera

DS-Qi2

16.25 megapixel
Monochrome
Cooled

High sensitivity

Detects even faint fluorescent signals

7.3μm pixels, high quantum efficiency, and very low read noise allow the DS-Qi2 to read in even faint fluorescent signals.

Excellent linearity

Reliable quantitative analysis made possible

With a linearity error of ±1%, the DS-Qi2 is a superb tool for measuring intensities in fluorescence samples, including time-based intensity measurement and ratiometric measurement.

High frame rate

Fast focusing, even with fluorescent images

With a high-sensitivity CMOS image sensor and USB 3.0-based data transfer, the DS-Qi2 enables high-speed live imaging and image capture at up to 45 fps (1636x1088 pixels).

Low noise

Acquires dim fluorescent signals with ultra-low noise

Both 2.2 electrons read noise coupled with a large full-well capacity and 0.6 electrons dark current allow the acquisition of 14bit fluorescence images with very little noise.

Indian Muntjac Deer Skin Fibroblast Cells, Cytoskeletal F-actin labeled with Alexa Fluor 488
Sample courtesy of: Michael Davidson and Florida State University
**Time-lapse photography**

**Fluorescent time-lapse imaging through integration with NIS-Elements software**

With a large field of view and pixel density, and low noise, the DS-Qi2 is ideal for time-resolved imaging applications.

---

Time-lapse images (every 1 second) of LLC-PK1 cells with GFP-EB3 tubulin. Each image represents the maximum intensity projection of the timelapse, allowing visualization of the end-binding protein located on the microtubule plus-ends, and allowing tracing of the microtubule path. DS-Qi2 captures an extremely large field of view, but still represents very fine details as demonstrated in this cropped timelapse sequence from a large FOV image. Objective: CFI Plan Apochromat Lambda 60X Oil / NA: 1.4

Nikon uses the NIS-Elements series as control software. NIS-Elements allows functions from basic imaging to control of the microscope and peripheral devices to be performed, as well as the measurement, analysis, and management of acquired images. Four basic packages and a variety of optional modules are available to suit every application and objective.

* See the NIS-Elements Catalog for details.

**Integration with the comprehensive imaging software series**

Compatible OS: Windows® 10 Pro 64bit, Windows® 7 Pro 32/64bit

* Nikon provides confirmed compatible PCs with up-to-date specifications. Contact Nikon for details.

**Free package**

The bundled free package offers functions for the display of scale on live images, full-screen display, and more. The simple operation screen makes shooting easy.

**Documentation package**

The documentation package is equipped with measurement and report creation functions. It enables general microscopic image acquisition in fields from biomedical to industrial, and is expandable through optional added features such as EDF and databases.

**Research package**

The research package enables the construction of advanced image acquisition systems, including multidimensional imaging (up to 4 dimensions for Br, 6 dimensions for Ar), through integration with systemized microscopes. Sets equipped with a rich range of image processing and analysis functions are available for every application.

**Multichannel (multi color)**

NIS-Elements can acquire full bit depth multi-color images, combining multiple fluorescence wavelengths and different illumination methods (DIC, phase contrast etc.), while offering independently scalable channels.

**Z-series**

Through motorized focus control, NIS-Elements reconstructs and renders 3D images from multiple Z-axis planes.

**Multi-dimensional Image Display**

NIS-Elements displays time lapse, multi-channel, multiple X, Y, Z positions in an intuitive layout, which allows for automatic playback and the ability to select subsections of the data to be saved as a new file.

Integration with the comprehensive imaging software series

Free package
The bundled free package offers functions for the display of scale on live images, full-screen display, and more. The simple operation screen makes shooting easy.

Documentation package
The documentation package is equipped with measurement and report creation functions. It enables general microscopic image acquisition in fields from biomedical to industrial, and is expandable through optional added features such as EDF and databases.

Research package
The research package enables the construction of advanced image acquisition systems, including multidimensional imaging (up to 4 dimensions for Br, 6 dimensions for Ar), through integration with systemized microscopes. Sets equipped with a rich range of image processing and analysis functions are available for every application.

Compatible OS: Windows® 10 Pro 64bit, Windows® 7 Pro 32/64bit
* Nikon provides confirmed compatible PCs with up-to-date specifications.

Contact Nikon for details.

HDR (High Dynamic Range) image acquisition
HDR creates an image with appropriate brightness in both the dark and bright regions in a sample by combining multiple images acquired with different exposure settings. It is also possible to create HDR image using multiple captured images.

Manual measurement and image annotation
Manual Measurement allows easy measurement of length and area by drawing lines or an object directly on the image. The results can be attached to the image, and also exported as text or to an Excel spreadsheet.

Auto measurement (Object Counting)
Performs binarization on images using previously set thresholds to measure the number, area, brightness, etc. of identified objects.

Grain size analysis
Detects and measures grains in one and two phase samples according to JIS G0551, ASTM E112-96/E1382-97 and ISO643 standards.

Cast iron analysis
Detects, measures and classifies graphite content as well as ferrite content in graphite-corrected samples according to JIS G5502, ASTM A247-06 and ISO945-1 standards.

EDF (Extended Depth of Focus)
Creates a single, all-in-focus image from images of differing focus. Such images can now be created by simply turning the focus knob.

Image stitching (Large Image)
Stitches together images from multiple fields of view during shooting to create an image with wide field of view. Images already acquired can also be stitched together.
Allows intuitive control of microscope cameras from tablet PCs

Simply installing NIS-Elements L on a tablet PC enables setting and control of DS-Fi3/DS-Ri2 microscope cameras, live image display, and image acquisition.

(Compatible OS: Windows® 10 Pro) * Nikon provides confirmed compatible tablet PCs with up-to-date specifications. Contact Nikon for details.

User Interface for naturally simple operation

NIS-Elements L displays various menus for image capture, saving, display, measurement and annotations using intuitive icons. It also supports touch screen operation.

A wide variety of tools

NIS-Elements L enables the conducting of simple measurements on images, with input of lines and comments. These can also be written onto and saved with the image, and measurement data can be output.

Scene mode

Ten camera setting patterns for optimal color reproduction and contrast for each microscope light source, observation method and type of sample, as well as custom settings, can be selected.

Biological Scene Mode
- Brightfield
- LED-Brightfield
- HE
- Asbestos
- ELISA

Industrial Scene Mode
- Wafer/IC
- Circuit board
- Metal
- Flat Panel Display

Measurement function
- Line distance
- Area
- Circle
- Circle distance
- Pitch distance
- Angle

Annotate function
- Line
- Arrow
- Text
- Marker
- Polyline

Graticule/scale function
- Crosshairs
- Simple crosshairs
- Circle
- Grid
- Horizontal scale
- Vertical scale

Other functions

- **Split screen display function**: A live image is displayed on the left side of the screen and the saved image is displayed on the right side. When synchronization is activated, synchronized magnification is applied to the both images.
- **Camera information**: A histogram and metadata of the image are displayed.
- **Full screen**: The image is displayed across the entire screen.
- **Saving**: The displayed image is saved with a new file name.
